Education

University of Wisconsin–Madison

Bachelor of Science in Computer Science and Data Science; GPA: 3.6/4.0

Madison, WI

Expected May 2027

Experience

Data Analyst Intern

Organic Valley

Jun. 2026 – Aug. 2026

Cashton, WI

- Built automated workforce analytics workflows in Python and Power BI to clean and analyze 800+ employee records and track turnover, retention, headcount, and workforce trends for HR leadership.
- Engineered a geospatial eligibility workflow using Azure Maps APIs, address matching, and business-rule evaluation to automate remote-work policy audits and reduce manual review.
- Designed an AI-powered employee support agent using Microsoft Copilot Studio, Power Automate, and SharePoint to improve benefits and Total Rewards knowledge retrieval.

Software Developer / Research Assistant

Schloss Visual Reasoning Lab, University of Wisconsin–Madison

Aug. 2024 – Jun. 2025

Madison, WI

- Developed interactive web tools supporting research on relationships between colors, concepts, and visual perception.
- Built front-end interfaces and computational workflows using React, Python, OpenCV, and REST-based services for visualization experiments.
- Compared human judgments with GPT-based model responses and contributed to research studying the stability of color meanings across cultures.

Machine Learning Research Fellow

Informatics Skunkworks, University of Wisconsin–Madison

Summer 2024

Madison, WI

- Developed machine learning workflows for semiconductor property prediction using Python, scikit-learn, and MAST-ML, including feature engineering, scaling, and model evaluation.
- Compared regression, random forest, LASSO, and neural network models using K-fold cross-validation, grid search, and hyperparameter optimization.

Data Analyst Intern

Diyar United Company

Jun. 2024 – Aug. 2024

Kuwait City, Kuwait

- Integrated and analyzed 500K+ records from SQL, Excel, and cloud sources to build 10+ Power BI dashboards across sales and business performance, reducing reporting effort by 30%.
- Performed analysis across 20+ markets to identify revenue drivers and trends associated with a 10% improvement in quarterly revenue.

Projects

SoundScape | React Native, GPT-4o-mini, Spotify API, Mapbox

- Developed a cross-platform mobile application using React Native that integrated Spotify, weather, traffic, and mapping APIs to generate context-aware driving playlists.
- Implemented AI-powered preference learning with GPT-4o-mini to personalize music recommendations based on user behavior.

RAG Evaluation Harness | Python, LangChain, FAISS, OpenAI API, Flask

- Built a retrieval-augmented generation pipeline using LangChain, FAISS, and OpenAI models for document question answering.
- Designed an automated evaluation framework using MRR and NDCG to benchmark retrieval performance across embedding models and chunking strategies.

Mini Container Runtime | C, Linux, Docker

- Built a lightweight Linux container runtime in C using namespaces, chroot, seccomp, and cgroups to isolate processes and filesystems.
- Implemented process isolation, filesystem virtualization, and syscall filtering to create secure, containerized execution environments.

Leadership & Involvement

Undergraduate Mentor, WACM | UW–Madison

Sep. 2024 – Present

- Mentor undergraduate computer science students through 1:1 support with coursework, debugging, technical development, and career preparation.

Technical Skills

Languages: Python, Java, C, JavaScript, SQL, R, Bash

AI / Data: PyTorch, scikit-learn, Pandas, NumPy, OpenCV, LangChain, FAISS, Power BI

Web / Backend: React, React Native, Flask, Tailwind CSS, SQLAlchemy, REST APIs

Tools / Cloud: Git, GitHub, Docker, Firebase, Azure, Linux, Jupyter, Microsoft Copilot Studio
